FREE BLUEPRINT

STEAL OUR TOWER METHOD

5 STEPS, FREE

FROM THE TOWER TO THE FLOOR THEY BUY

OMNYA LAB

THE RESULT

25 FLOORS ON THE WATER

The marina below, the Gulf behind, a third of the windows lit at blue hour. Nobody has poured a slab yet, and this is already what buyers see.

Five steps take it from this photo to the floor a buyer picks, and this blueprint shows you each of them, with two of our prompts word for word.

STEP 01

TWO REFERENCES ONE PROMPT

Nano Banana Pro on Higgsfield, 16:9. Reference 1 is a photo of the building, reference 2 is a photo taken from the height you want, used only for the camera.

PROMPT **NANO BANANA PRO · THE TOWER**

Use reference 1 for the building: keep this exact tower design — white wavy cantilevered floor slabs offset floor by floor, flat thin cantilevered roof canopy, clear floor-to-ceiling glass — same slab design and roof, but taller: 25 floors, slender proportions, height about 4 times its width. Use reference 2 only for camera position and depth, not for the building.

Elevated three-quarter aerial view, 16:9, camera about 80 m high and 300 m away, looking slightly down. The tower stands just left of center on the Dubai Marina waterfront and rises to about 85% of the frame height, roof just below the top edge. Below it: the marina basin with rows of white yachts and calm water, palm-lined promenades, low warm garden lights. Behind it: the calm Gulf and a long horizon; on the left, far in the distance, the Dubai Marina skyline softly hazed. The right 40% of the frame is open, clean sky.

Light: blue hour, ten minutes after sunset. Sky gradient from deep cyan at the top to soft peach at the horizon. Warm 2700K lights on inside about a third of the apartments, scattered randomly, so the slabs glow from within; podium and colonnade warmly lit.

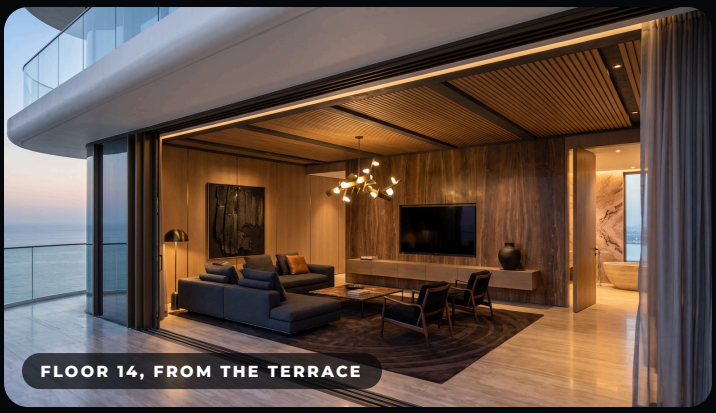

Shot on DJI Inspire 3, 24mm, f/5.6, everything sharp, light atmospheric haze on the horizon for depth, natural contrast, true colours, real luxury developer launch photography.

Avoid: changing the tower design, fewer than 25 floors, eye-level or frontal symmetric view, people, cars, text, logos, lens flare, HDR, oversaturation, CGI look.

25 floors, noticeably taller than the reference.

STEP 02

THE END FRAME
THE TERRACE

Before any video, the place where the flight lands. The living room seen from the terrace at 45 degrees, the bathroom visible through the open door, the same blue hour as the tower.

Four references this time: the tower, a sofa, a chandelier and a stone sample. It took three rounds; the third is the one we kept.

→ The whole prompt, and the two rounds before it, are in the Full Blueprint.

STEP 03

THE FLIGHT

Seedance, the tower as start frame and the terrace as end frame. A 480p draft first, then 1080p.

PROMPT **SEEDANCE · THE FLIGHT**

```
One single continuous drone shot, no cuts, no dissolves. The
first second holds the first frame exactly, then the camera
starts moving slowly: the white tower on the Dubai Marina
waterfront at blue hour. The camera flies forward and slightly
upward towards the tower, smoothly accelerating, heading for one
floor slightly above the middle of the building. As it
approaches, the white curved balcony slabs grow larger and pass
above the lens, the warm lit windows of that floor fill the
frame. The camera slows down, glides over the terrace of that
floor, under the curved white slab of the floor above, and comes
to rest in front of the fully open sliding glass wall, looking
into the warmly lit living room, matching the last frame exactly.

The camera physically flies through the space; the facade,
columns and glass stay solid and in place for the whole shot, the
balcony slab stays above the camera at all times, the transition
is a real camera movement, not a dissolve.

Steady gimbal movement, constant forward motion, no rotation, no
shaking. The building, the balconies and the room stay exactly
the same as in the two frames. Blue hour light constant
throughout, warm interior lights, calm sea.
```

STEP 04

ROOM BY ROOM
LAST FRAME FIRST

Every next clip, on Kling, starts on the exact last frame of the one before. We cut the flight at frame 119, used that frame to start the living room, and the last frame of the living room to start the bathroom.

So the whole visit plays like a single shot.

The Kling prompts, the frame we cut on and the colour fix for the bathroom are in the Full Blueprint.

STEP 05

THEY PICK THE FLOOR

On the SAMAR site the buyer moves over the tower, chooses a floor, flies in through the glass and walks from the terrace to the bathroom.

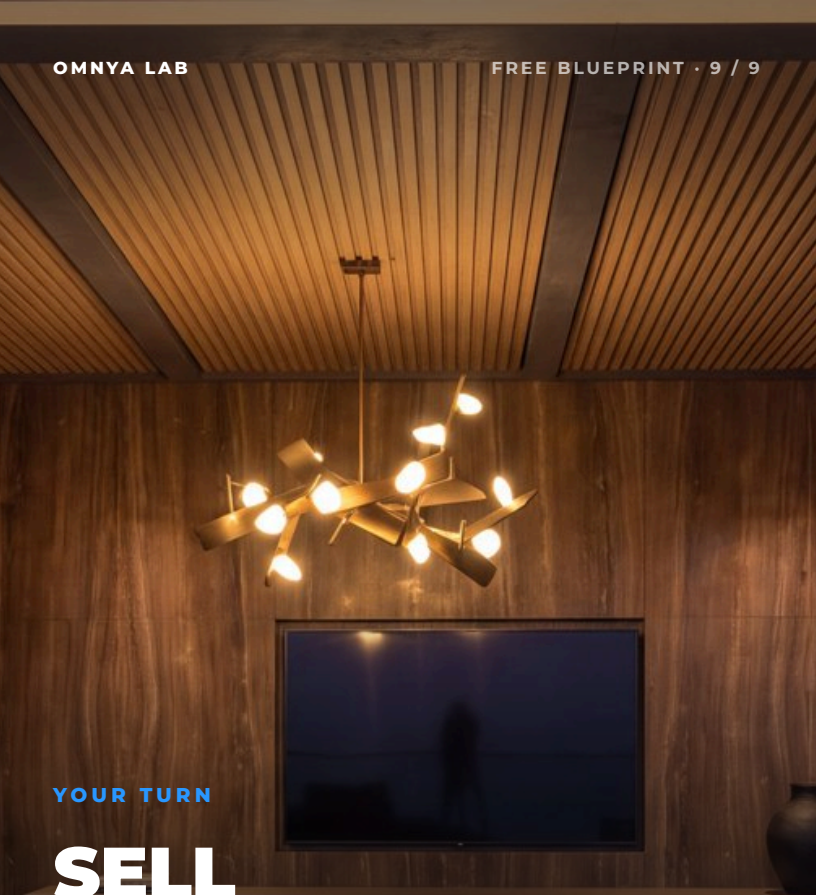

Everything on screen is video. The only thing drawn by code is the light on the floors, the panel and the buttons, and Claude writes that part with you.

THE FULL BLUEPRINT

HOW TO BUILD A TOWER THAT SELLS

00 The tower photo, every prompt
01 What you are building
02 The shot list
03 The clips, one start frame at a time
04 The way back
05 Tracing the floors
06 The floor picker
07 The building and the apartment
08 The player
09 Rooms and hotspots
10 The return and the ending
11 Phones
