STEAL OUR TOWERS METHOD

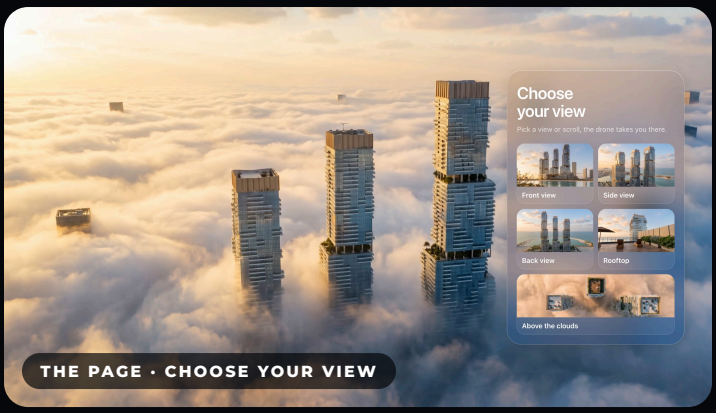

5 STEPS, FREE

FROM ONE PHOTO TO THREE TOWERS
YOU CAN FLY AROUND

OMNYA LAB

THE RESULT

PICK A VIEW, THE DRONE FLIES

Three towers on a lagoon, and a page where you pick the view: Front, Side, Back, Rooftop or Above the clouds. The drone flies there through one continuous shot, forwards or backwards, and goes through the fog when that is the shorter way.

No 3D artist and no render farm: Claude wrote the towers in code, every photo comes from the 3D with the camera locked, and six clips join into one loop with no cut. This blueprint shows you the five steps and how each prompt starts.

STEP 01

ONE PHOTO SETS THE TOWERS

Everything starts from one photo: the front view across the lagoon at sunset. It sets the shapes, the glass, the crowns and the light, and every other view is checked against it.

PROMPT 1 — **NANO BANANA PRO · THE CROWNS**

```
Image 1 is a real photograph. Keep it exactly as it is, pixel
for pixel: same camera, same framing, same towers, same
lagoon, beach, sea and sky, same light and colours. Change
only one thing: at the top of each of the three towers, the
crown of vertical fins becomes a smooth champagne bronze
screen band set slightly back from the facade, about two
floors tall, with soft vertical bands of light and shade and
```

Every prompt, whole, is in the Full Blueprint

STEP 02

THE TOWERS IN CODE

Claude Code copies the photo in three.js, with the fog, the water and the low sun, and gives the camera seven keyframes on one path, so the last view flies back into the first.

PROMPT 2 — **CLAUDE CODE · THE 3D**

```
Copy the three towers in this photo in three.js, in real
metres: each tower is a stack of glass blocks set slightly
off one another like steps, floors of 3.6 metres, a double-
height planted terrace between the blocks, a champagne crown
on top. Keep the heights of the photo: from the front they
climb from left to right, the right tower the tallest.
```

The whole prompt and the code are in the Full Blueprint

STEP 03

EVERY VIEW
CAMERA LOCKED

The 3D frame is Image 1 and it decides the camera; the good photos go in only for the light and the materials. Same heights and same side as the 3D, or the clips invent towers later.

PROMPT 3 **NANO BANANA PRO · THE BACK VIEW**

```
Image 1 is the exact frame of this photograph. Keep the camera position,
height, lens, framing and the outline, height and place of every building
exactly as in Image 1; only surfaces, light and realism change. The tower
on the left is the tallest, a few floors taller than the others; the
central tower is the lowest; the tower on the right is in between, exactly
as in Image 1. Image 2 and Image 3 are real photographs of the same three
towers: use them for the light, the colours, the sky, the glass, the white
balconies, the crowns and the planting; the camera is only Image 1, the
cameras of Image 2 and Image 3 are gone. Three residential towers seen from
a drone behind them at mid height, standing whole from their low podium to
their crowns. Each tower is a stack of glass blocks set slightly off one
another like steps, with double-height open planted terraces between the
blocks, slim white columns, palms and trees in them. Facades: floor-to-
ceiling glass in single uninterrupted panels, pale low-iron glass
reflecting the sky in silver-blue, slim dark bronze frames; every floor has
a thin white honed limestone slab edge, and deep white balconies in
staggered runs with slim dark bronze handrails. Each tower ends in a crown
exactly like the crowns in Image 3: a champagne bronze screen about two
floors tall, set back from the edges of the roof, with a smooth concave top
edge rising at the two ends to rounded corners, soft vertical bands of
light and shade. Behind the towers a calm round green-blue lagoon closed by
a long curving spit of pale sand with a few palms, and beyond it the open
sea out to a hazy horizon; at the foot of the towers a low podium with roof
gardens and palms. The sun is low on the left a few minutes before sunset:
warm apricot light rakes across the left faces and catches the white slab
edges, the shaded faces are cool silver-blue, the sky is soft blue with
scattered warm clouds glowing apricot toward the left. Editorial
architecture photograph in the spirit of Iwan Baan, natural colour like a
Kodak Portra 400 film scan, gentle highlight roll-off, fine film grain.
```

STEP 04

SIX CLIPS
ONE LOOP

The 3D video gives the camera move, the two photos give the start and the end, on Kling 4.0 video edit, 5 seconds each. The end of every clip is the start of the next, and the last one lands back on the first.

PROMPT 4 — **KLING 4.0 VIDEO EDIT · ONE CLIP**

```
Use the input video only for the camera move: same path, same
speed and same framing at every moment. The video starts
exactly on the start image and ends exactly on the end image.
The three residential towers, their champagne bronze crowns,
the glass and white balconies, the lagoon, the sea and the
warm low sun on the left stay exactly as in the two images.
Real drone footage. The drone rises slowly and arcs to the
```

The six clip prompts and the checks are in the Full Blueprint

STEP 05

CHOOSE YOUR VIEW

The six clips become one video, and the page keeps a second copy of it played backwards. Every view is the last frame of a clip, so a tap plays the shortest way there and stops on that exact frame.

How the page picks the way, stops on the frame and opens fast on a phone is in the Full Blueprint.

THE FULL BLUEPRINT · €5.99 INSTEAD OF €29

HOW TO BUILD THREE TOWERS

YOU CHOOSE THE VIEW

00 The fast way: hand it to Claude Code

01 The photo that sets the towers

02 The towers in code

03 The fog, the water and the light

04 Seven keyframes, one loop

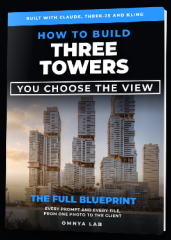

05 Six photos, camera locked

06 Six clips, start and end

07 The grade and the master

08 The choose your view page

09 Delivery and what to charge

YOUR TURN

BUILD YOUR TOWERS

The Full Blueprint has every prompt whole, the 3D code, the page and the way we hand it to a client. **€5.99 instead of €29, and only on our page.**
