# How to go viral in days, not years

For anyone who posts reels

omnyalab.com

# How to go viral
# in days, not years

On 29 October our Instagram had 59 followers. Twelve days later it had 5,588, and one reel had passed 156,000 views. This playbook is the method behind those numbers, step by step, with what each part cost and what flopped, so you can run it on your own account.

### Who it's for

Creators, 3D artists, architects and anyone who posts reels and wants them to reach people who don't follow yet. You don't need SketchUp or a render engine: we make every 3D with Claude in code, the photos and the clips on Higgsfield, and the edit on a laptop.

### Where the numbers come from

Our own Instagram Insights, Stripe and DM bot, plus the reels we measured from other creators, each with its date. When we couldn't check a number, we left it out.

01 Copy a format that already won

02 The first second is the whole reel

03 Build it without a render farm

04 The edit that keeps them watching

05 Caption, cover and the word

06 From views to money

07 What flopped so you skip it

08 Your first 7 days

The tower reel, 3 November

The three towers, 11 November

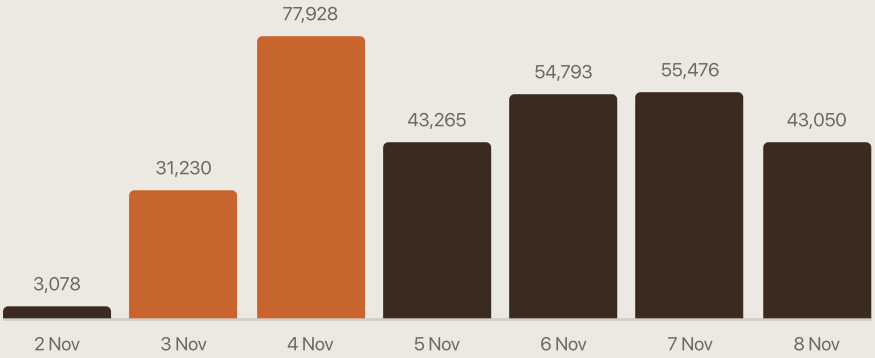

The stadium 3D, next in the queue

# What changed in numbers

Before 26 October we posted reels of made-up houses with a median of about 1,400 views and zero follows. Then we switched to reels that show how the 3D is made, and copied formats that had already gone viral. These are the days that followed.

### Views a day, Instagram Insights

The tower reel went out on 3 November at 18:02. In 28 days, from 12 October to 8 November, the account had 326.1K views, and 90.7% of them came from people who didn't follow us.

## 59 to 5,588

followers, 29 October to 10 November

## 156,486

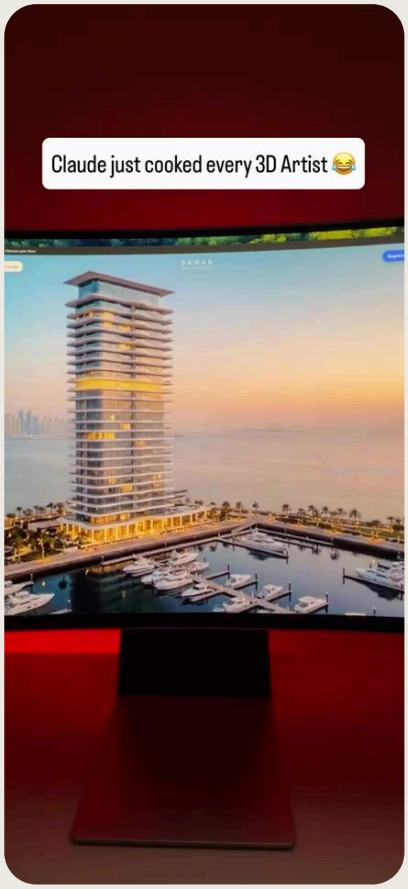

views on the tower reel on 10 November, 180K+ on 13 November

## 4,281

comments on the tower reel, with 2,957 sends, 3,620 saves and 846 follows (10 November)

## 135K+ and 190K+

views on the three towers reel and on the BUILD trial reel, 13 November

The tower reel: 156,486 views on 10 November, 180K+ on 13 November

### Who watched, 28 days to 8 November

## 83.5%

men

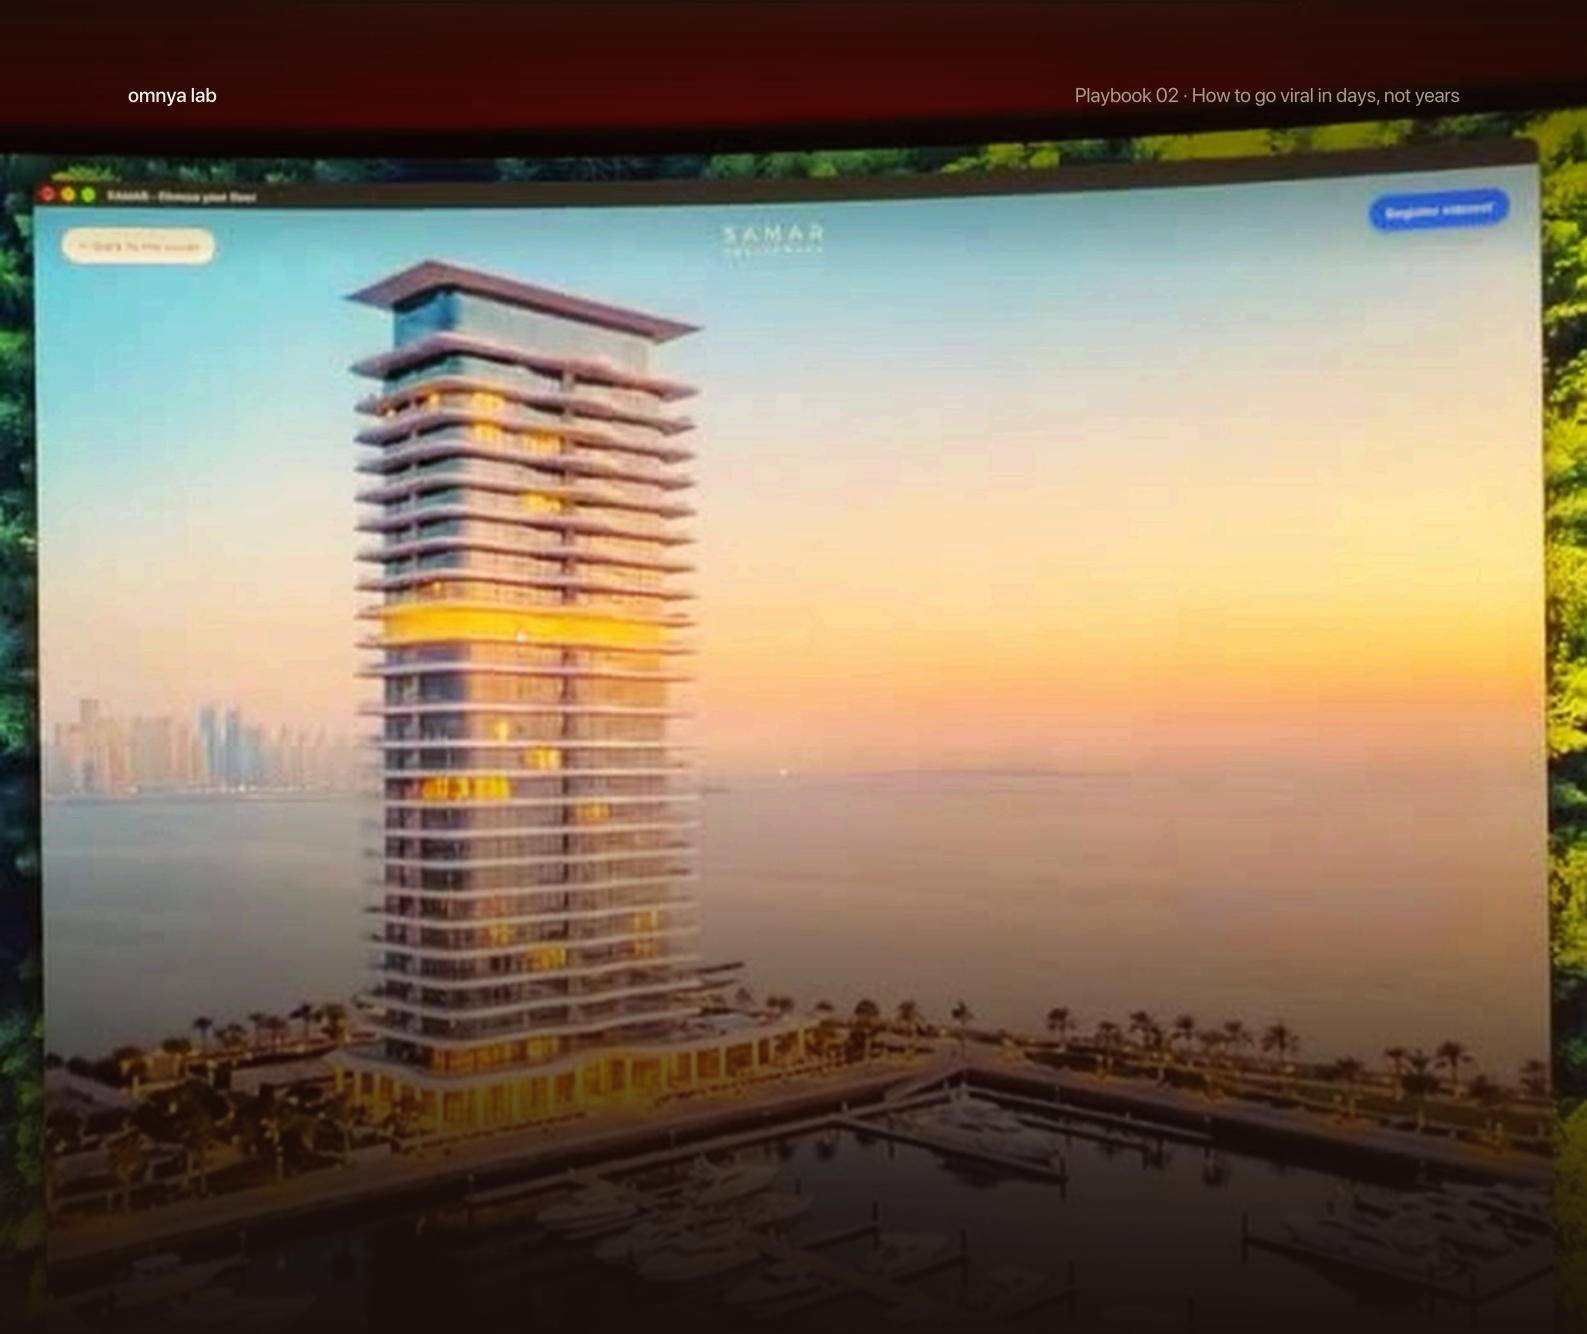

## 42.6% and 34.5%

aged 25 to 34, and 18 to 24

## 23%

in the USA, then India 8.4%, Brazil 4%, Italy 2.3%, Turkey 2%

> Before 4 November the account had sold nothing. From 4 to 12 November Stripe paid out €1,095.76 net, from guides that the reels sent people to. Chapter 06 shows how.

Chapter 01

# Copy a format that already won

Our reels of made-up houses had a median of about 1,400 views. Once we showed how the 3D is made, we got reels of 36K and 156K, and the biggest one copied a format that had gone viral six days earlier. You pick from reels with measured numbers, and you put your own subject inside.

## Start from a reel that already won

On 28 October @michonmotion, an account with 7,143 followers, posted a tower with the line "Pick a floor and the camera flies you inside". It reached 2.6 million views, 364 times its followers, with 6,825 comments and 35,767 sends. @lynam_up posted a tower on the 29th, and we posted ours on 3 November on the same audio as michonmotion.

28 October
**@michonmotion**
2.6M
7,143 followers, 364× its followers

29 October
**@lynam_up**
1.4M
"Client Paid $3,350", 14K followers, 102×

3 November
**@omnyalab**
156,486
on 10 November, 28× our followers that day, 180K+ by 13 November

## Measure it before you copy it

Divide the views by the followers of the account that posted it. A big account with big views tells you little, while a small account at 100× or more tells you the format did the work. These are the formats we measured in our niche between October and November.

| Format | Creator | Views | × followers |
|---|---|---|---|
| A tower, you choose a floor and fly inside | @michonmotion | 2.6M | 364× |
| A stadium, you see the view from your seat | @_byomid | 568K | 415× |
| Two options, the viewers pick one | @dantria.design | 874K | 183× |
| The same format | @shahrzad.interiors | 2.3M | 167× |
| A reel edited by Claude | @visionaryclown.tv | 1.2M | 127× |
| One prompt, ten facades | @skaleout | 107K | 84× |
| A rough 3D that turns into a photo, 12 s | @nathangalmiche.lab | 120K | 80× |
| The same, 9.5 s | @valiullinalina | 257K | 71× |
| "Viewport vs. Render" | @daybrams | 2.4M | 43× |

Before that format @skaleout's reels had 400 to 900 views, with 1,273 followers. Every 3D to photo reel in our sample stayed under 12 seconds.

> Copy the structure: the gesture, the length, the audio and the second the reveal lands. Then change the subject. Instagram holds back content that is "largely repurposed" with "only minor, immaterial edits", so you never repost someone else's video.

## The gesture rule why the tower travelled

The line on screen didn't make the tower go viral. The same "3D artist" line sat on two other reels of ours that stopped at 9.7K and 37K. What the tower had, and those two didn't, is what we now check on every idea before we make it.

1. **One huge thing everyone recognizes.** A tower, a stadium, a yacht. People understand it in the first frame, without reading.
2. **One gesture.** The viewer makes one choice: a floor, a seat, a view. On the tower it's "choose your floor", on @_byomid's stadium it's the seat.
3. **At the end you are inside.** The camera flies into the floor you chose, so the reel pays off the choice.

When the gesture is missing, the reel turns into what we call another City: a lot of comments and no reason to watch the rest of your account (Chapter 07).

## Our idea queue one choice each

| Idea | The one choice | Measured close to it |
|---|---|---|
| Stadium | choose your seat | @_byomid, 568K and 146K |
| Yacht | choose your cabin | not measured yet |
| Race circuit | choose your corner | not measured yet |
| An island sold in lots | choose your lot | not measured yet |
| A plane | choose your seat | not measured yet |
| The same tower at different hours | choose your hour | our tower, 156,486 |

## How often the same subject

- **One tower reel a week at most.** That's our rule on @omnyalab, and every other day of the week gets a different subject.
- **A second post of the same tower gets about a quarter.** @lynam_up went from 1.4 million to 341K with the same tower, and our second tower reel went from 156K to 43K.
- **Write the idea down before you open Claude**: the huge thing, the one choice, the place you end inside. If one of the three is missing, pick another idea.

Chapter 02

# The first second is the whole reel

About 30% of a reel's views come on its first day, and people decide in the first second whether they stay. You open on the result, with a line that says what just happened, short enough to read at a glance.

## Show the result and keep it kind

We sorted the YouTube titles in our niche by tone and took the median views of each group. Titles that show a result beat every other kind, and the aggressive ones, the kind that tell you to stop doing something or that your work looks bad, sit at the bottom.

Median views per group, with 27, 14, 19 and 7 titles. In the same sample, titles with "free" had a median of 126K against 57K, and titles with "3D" 89K against 54K. A 2026 study by Kim found that negative posts get more angry reactions and fewer likes and shares.

## Lines that worked copied exactly

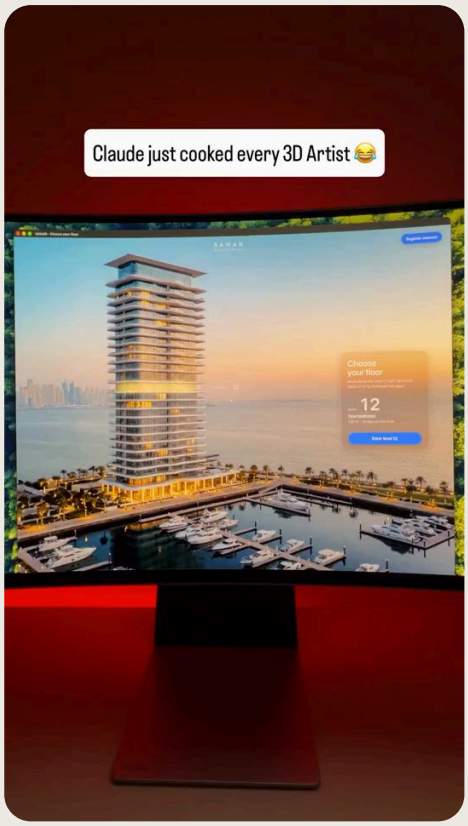

| Line | Creator | Views |
|---|---|---|
| "Pick a floor and the camera flies you inside" | @michonmotion | 2.6M |
| "explain it like i'm five, part 1: what's an API?" | @canwebuildthis | 2.3M |
| "she said no sixty-one times. that's the job." | @canwebuildthis | 2.1M |
| "He asked Claude for a million views. Claude showed him 2.6 million" | @morrow.studio3d | 1.4M |
| "Client Paid $3,350" | @lynam_up | 1.4M |
| "The SECRET Workflows to Convert ANY Image to 3D" | Salmaan Mohamed, YouTube | 1.32M |
| "What if you could see the view from your seat before buying a ticket?" | @_byomid | 568K |
| "Everyone tells you to install Claude skills. Nobody tells you which ones." | @nocode.joshua, TikTok | 486,800 |
| "I Tested GPT Astra for 3D Modeling - This is Getting Serious" | Urban Decoders, YouTube | 451K |
| "Claude just got scary good at video animation." | @nocode.joshua, TikTok | 259,100 |
| "I gave Claude a photo of a house and it rebuilt it" | @tunestechtips | 166K |
| "Claude just cooked every 3D Artist" | @omnyalab | 156,486 |
| "Claude + Three.js = Premium 3D Motion Graphics" | Matt Penny, YouTube | 136K |
| "Claude + Higgsfield killed 3ds Max!!" | @omnyalab | 36,882 |

What they share: something precise that just happened, or a number. @nocode.joshua's median on TikTok is 23,900, so that line did about 20 times his usual. Our lines are copied as they appeared on screen, without the emoji.

## Words on screen two lines at most

The hook sits on top of the strongest frame you have. In the tower reel the page with the tower is already open on the monitor at second zero, and the line is in a white box above it.

1. **Two lines, three or four words.** At most two words per line, never one long line across the frame.
2. **Big and high.** About 88 px at the top and 84 px at the bottom on a frame 1080 wide, inside the safe zone in Chapter 04.
3. **One look per account.** We use the white Instagram style box in SF Pro semibold at about 65 px, or white text with a soft shadow. Between reels only the words change.
4. **Words in time with the voice.** If the reel has a voice, three or four words at a time, timed to the speech. We get the timings from faster-whisper.
5. **The top comment is a joke.** Under michonmotion's tower the top comment was "90% CPU", with 5,023 likes. Pin a short, funny first comment of your own.

Second zero of our tower reel, 3 November

## Where the line comes from never from your head

Every hook we post is copied from a line with a measured number next to it, like the ones on the previous page, and we change only the subject. A line we invent has no number, so we can't tell if it worked because of the line or in spite of it.

- **Say what the viewer gets or what just happened.** "Pick a floor and the camera flies you inside" tells you the whole reel in nine words.
- **A number when you have a true one.** "Client Paid $3,350" works because the figure is precise. Use it only with the amount you were actually paid.
- **Keep a file of lines with their numbers.** Every time a reel in your niche passes 100 times its followers, copy its line, the creator and the views into it, and pick your next hook from there.
- **No insults to the viewer or to their work.** Those lines had the lowest median in our sample, 6.7K.

Chapter 03

# Build it without a render farm

Every 3D in our reels is a three.js page that Claude writes. Higgsfield turns its frames into photos with Nano Banana Pro and the photos into clips with Kling, one clip at a time, so you see the bill before you pay it.

# The 3D in code, with Claude

You describe the building to Claude in metres and ask for one HTML page in three.js. You open it in the browser and ask for changes in plain words until the frame looks right. We have no SketchUp, so every 3D we post is made this way.

### The three towers

three.js 0.160, a raymarched fog that moves, the sea with Water.js, and three states on one timeline: fog only, the towers coming out of the fog, then the view from above.

### The stadium

Three rings of stands with 108,761 seats, drawn as instanced meshes so the page stays fast in the browser. The seats carry the gesture: you pick a block and see the view from it.

Prompt — Claude

Build a single HTML page in three.js 0.160, units in metres, following the references I attach: [number] residential towers of [height] m rising out of a sea of fog at sunrise, with the sea below in Water.js. The fog is raymarched and drifts slowly.

Put three states on one timeline: fog only, the towers coming out of the fog, then an aerial view from above. Add a panel "Choose your view" with one button per tower that flies the camera into its top floor.

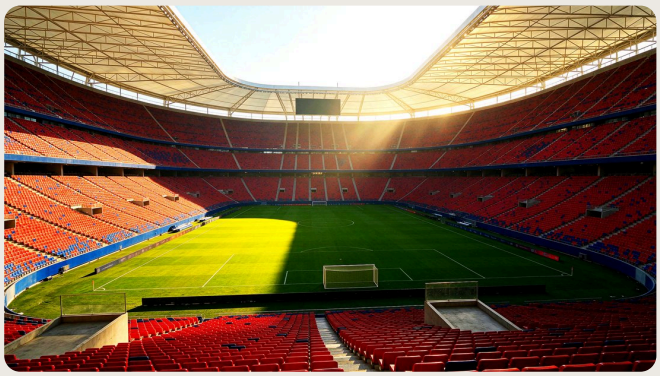

Add a key that plays the camera move and records it as an MP4, 1080 × 1920 at 30 fps. Keep vertical lines straight the whole time.

- **Model only what the camera sees.** On an earlier villa we modelled a bedroom, a bathroom and a corridor the video never entered, and that was a day gone.
- **The gesture is a button on the page.** "Choose your floor" or "Choose your view" is part of the 3D, so the recording shows a person choosing.
- **Record the page itself.** The tower reel is a recording of the page playing on a curved monitor. With Claude Code on your computer the MP4 saves to your folder; in claude.ai, record the screen.

3D page

Photo

The stadium page in three.js, and the same frame after Nano Banana Pro on Higgsfield.

# From frame to photo on Higgsfield

The 3D gives you the framing and the geometry, and Nano Banana Pro turns it into a photograph. The rule that saves you the most money is simple: the 3D stays exactly as it is, and only the look changes.

1 **Take the frames from the page** at the format you'll post, one for each moment of the reel.

2 **Image 1 is always the 3D frame.** Every round starts again from the 3D, the brief and one sample per material, never from a photo that came out of an earlier try, because errors pile up.

3 **Lock the framing.** Same camera, same proportions, same buildings. The only reference is the 3D, never a photo of another place.

4 **Choose the mother photo.** The strongest frame becomes the one every other view follows. We mark it with a heart on Higgsfield so nobody uses the wrong one.

5 **Unlimited on, one image per send, 2K.** On our plan Nano Banana Pro runs in Unlimited only with one image per generation, and a page reload turns Unlimited off, so check it before every send. No 4K unless you need it.

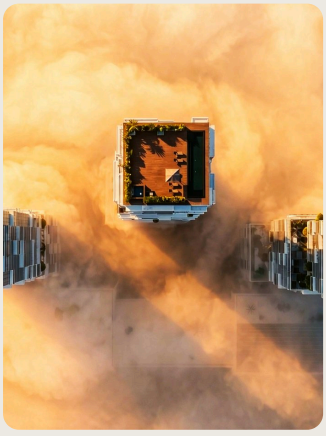

6 **Grade every output.** A gentle S curve, deeper blacks, a little vibrance and sharpness, then check it at 100% and only then put it in the edit.

Formula — Nano Banana Pro · 2K · one image

Image 1 is a frame of a 3D model. Keep the framing, the camera, the geometry and every proportion exactly as in image 1, and make it look like a photograph taken on location. Materials: [one line per material, matching the samples attached]. Light: [time of day, direction of the sun, weather].

Do not add buildings, people, cars, text, letters or logos.

On the stadium we also used Seedream 5.5 for some photos, at 3.5 credits per 2K image. Nano Banana Pro in Unlimited stays our default because the tries cost nothing.

The three towers from above, one of the photos we made from the aerial state of the page.

## Clips with Kling one at a time

For the towers and the stadium we used Kling's video edit mode: the recording of the 3D move as the guide video, plus a start photo and an end photo. The 3D gives the motion, the photos give the look, and you control every clip before you pay for the next.

1 **Say the cost before you press Generate.** Read the credits on the button and write them down. On 6 November we threw away 250 credits by skipping this.

2 **One clip, then check it.** Compare the first and last frame of the clip with your start and end photos. Keep the difference under about 6 out of 255, or the cut shows.

3 **The next clip starts from the true last frame** of the previous clip, exported as PNG, never from the photo you planned.

4 **Only straight zoom-ins, with visible fog drifting.** These are the moves that held on our towers. The fog gives the clip something alive to move through.

5 **Need the move backwards?** Reverse the clip with ffmpeg. Never pay to generate it again.

Formula — Kling 3.0 · pro · sound off

The reference image is the first frame; keep the room layout, the furniture and the materials exactly. Only the camera moves: one slow move, from where to where. Keep all vertical lines straight. What moves in the scene: water, palm leaves, a curtain. What stays out of focus in front.

Smooth stable camera, real speed, no particles, no sparkles, no glitter, no magic effects.

This is the formula from our house reels, and the last sentence is the only "no" we write: video models add sparkles and floating dust on their own, so we say it out loud.

## When a clip goes wrong the fixes

| Problem | Fix |
|---|---|
| Furniture or floors melting | A shorter, softer move: from an orbit to a short push in |
| Doors, windows or facades bending | Less distance travelled; a sideways slide holds better than a push |
| The building changes | Repeat "keep the layout" and animate only camera and light |
| The clip feels frozen | Add one living thing: fog, a curtain, palm leaves, water |
| A view keeps failing | One more try, then skip it and use another shot |

## What it costs in Higgsfield credits

These are the credits from our own projects, with the date each number was paid or read on the Generate button. Prices change, so the number on the button is the one that counts.

| What | Settings | Credits | From |
|---|---|---|---|
| Photo, Nano Banana Pro | 2K, one image per send, Unlimited on | 0 | Our plan |
| Photo, Nano Banana Pro | 2K, outside Unlimited | 2 | Paid, 27 Oct |
| Photo, Nano Banana Pro | 4K | 4 | Paid, 29 Oct |
| Photo, Seedream 5.5 | 2K | 3.5 | Stadium, Nov |
| Clip, Kling 3.0 | 1080p, sound off, 3 s | 4.5 | Paid, 20 Oct |
| Clip, Kling 3.0 | 1080p, sound off, 4 s | 6 | Read on the button, 1 Nov |
| Clip, Kling 3.0 | 4K, sound off, 4 s | 24 | Read on the button, 1 Nov |
| Clip, Kling 4.0 video edit | 1080p, 4 s, guide video + start + end | 16 | Stadium, paid, Nov |
| Clip, Kling 4.0 video edit | 1080p, 5 s, guide video + start + end | 20 | Paid, Nov |

## Two whole reels what they cost

### 160 credits

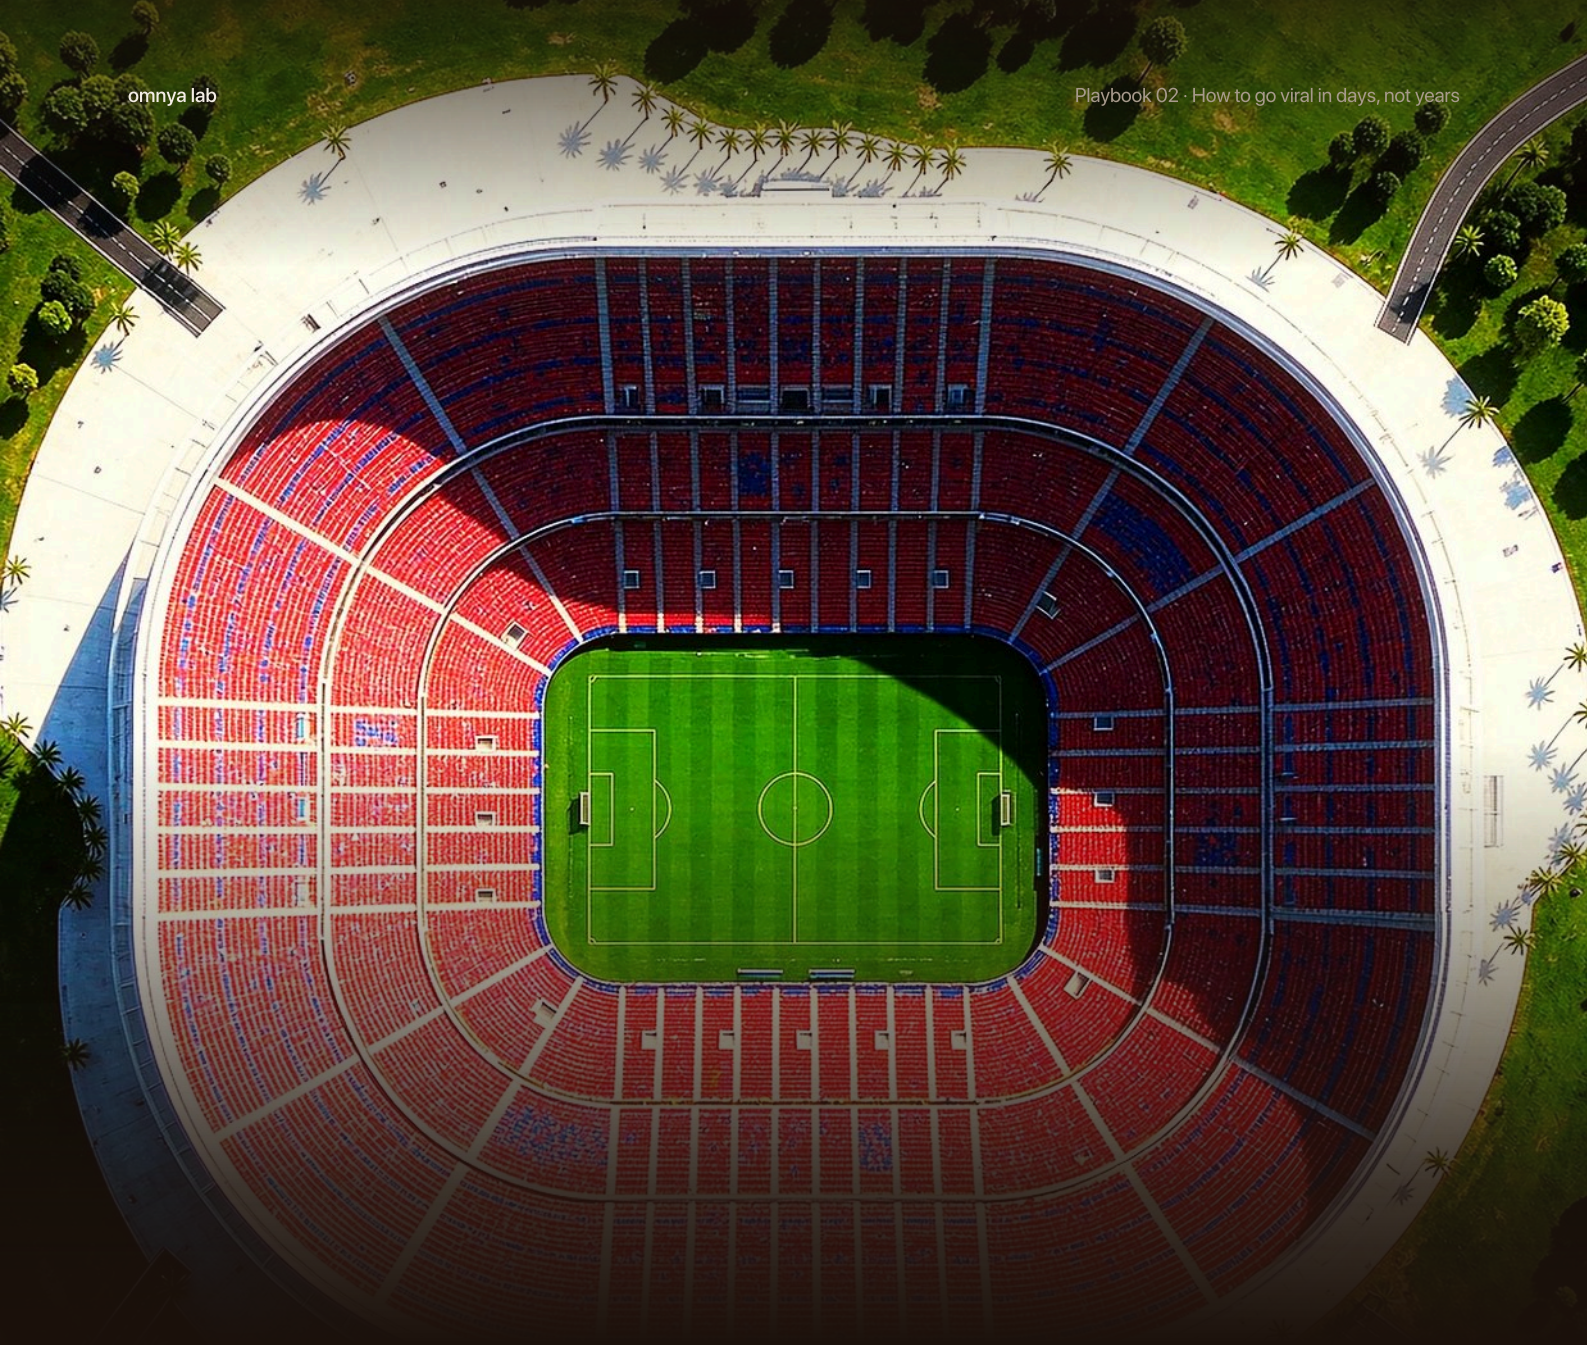

The three towers: 6 clips for a 30-second loop

### ~199 credits

The stadium: 5 clips of 4 s at 16 credits each, about 199 credits for the whole job

## The rules that keep the bill down

- **A budget before you start:** number of clips × the price on the button, plus 25 credits for redos. If the estimate goes over, stop and decide.
- **Two redos per clip at most.** If the third doesn't work, keep the best one and move on, or change the move.
- **1080p, never 4K, for a reel.** A 1080 × 1920 reel can't show 4K, and on Kling 3.0 the 4K clip costs four times as much.
- **All the trial and error happens on the photos**, where Unlimited makes tries free, and never on the clips.
- **No presets.** They change the look of the photos you already approved.

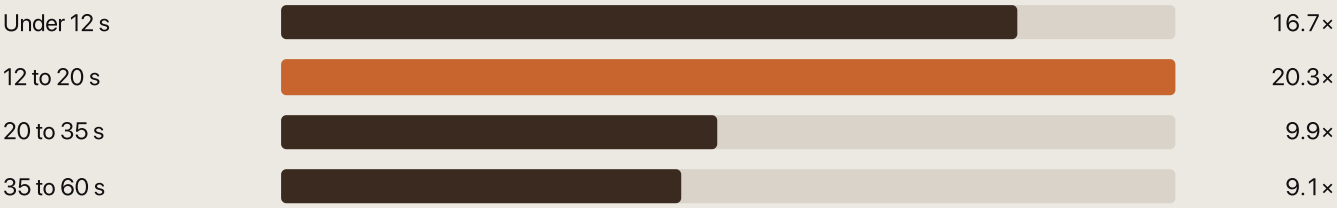

Chapter 04

# The edit that keeps them watching

Instagram ranks reels on watch time, likes per reach and sends per reach, and sends weigh most with people who don’t follow you yet. A short reel on a trending track, cut on the beat and closed inside the building, gets watched to the end and sent.

## How long 12 to 20 seconds

We measured 116 reels from accounts with up to 60K followers and grouped them by length. The number is the median of views divided by the account's followers.

Among the reels closest to ours, the gap is wider: 28.2× at 12 to 20 seconds against 7.1× at 35 to 60. Our tower ran 16.7 seconds, while our two City reels ran 37.8 and 34.9 seconds and made €0.41 per 1,000 views.

One study points the other way: Socialinsider found the best median, 10,374 views, at 45 to 60 seconds, measured on brand reels. For accounts like ours, the numbers above are the closer match.

## The audio and the drop

Use a track that is trending in your niche, and copy where the format you're copying starts it. Our tower used "We Do What We Want" by Alan Fitzpatrick, the same track as michonmotion's, cut in at 2:08.5 where michonmotion cut in at 2:05.5. Our "Tower 1 DAY" reel used "float" by Thiago Sub, the track under @lynam_up's towers.

- **The reveal lands on the drop.** Find the second the beat hits, then place the strongest frame of the reel there.
- **Write the beat grid before you cut.** If the drop falls at 8.95 s and a beat lasts 0.4475 s, beat n falls at 8.95 + 0.4475 × n. Every cut and every word lands on one of those.
- **A cut every two beats in the fast part.** To shorten a slow passage, cut whole beats from the video and the same number from the music.
- **No dead time.** After the last line, the scene leaves within about a second.
- **If you go longer, change something every few seconds.** Serhant's 34.5-second reel has 9 jump cuts and text that changes about every half second, and Hormozi's 134-second one shows a chapter card about every 10 seconds.

If your reel has a voice — Our tutorial format, approved 6 November

The voice is Archie on ElevenLabs v4 at stability 0.4, the words appear three or four at a time in sync with it, and the export has no music, which we add when we post. Sound effects stay low (an impact, a whoosh, a cash register), and the last line is whispered.

## Where text can go on a 1080 × 1920 reel

Long phones zoom the reel and cut about 45 px on each side. On the right there is the column of likes and comments, at the bottom the name, the audio and the caption.

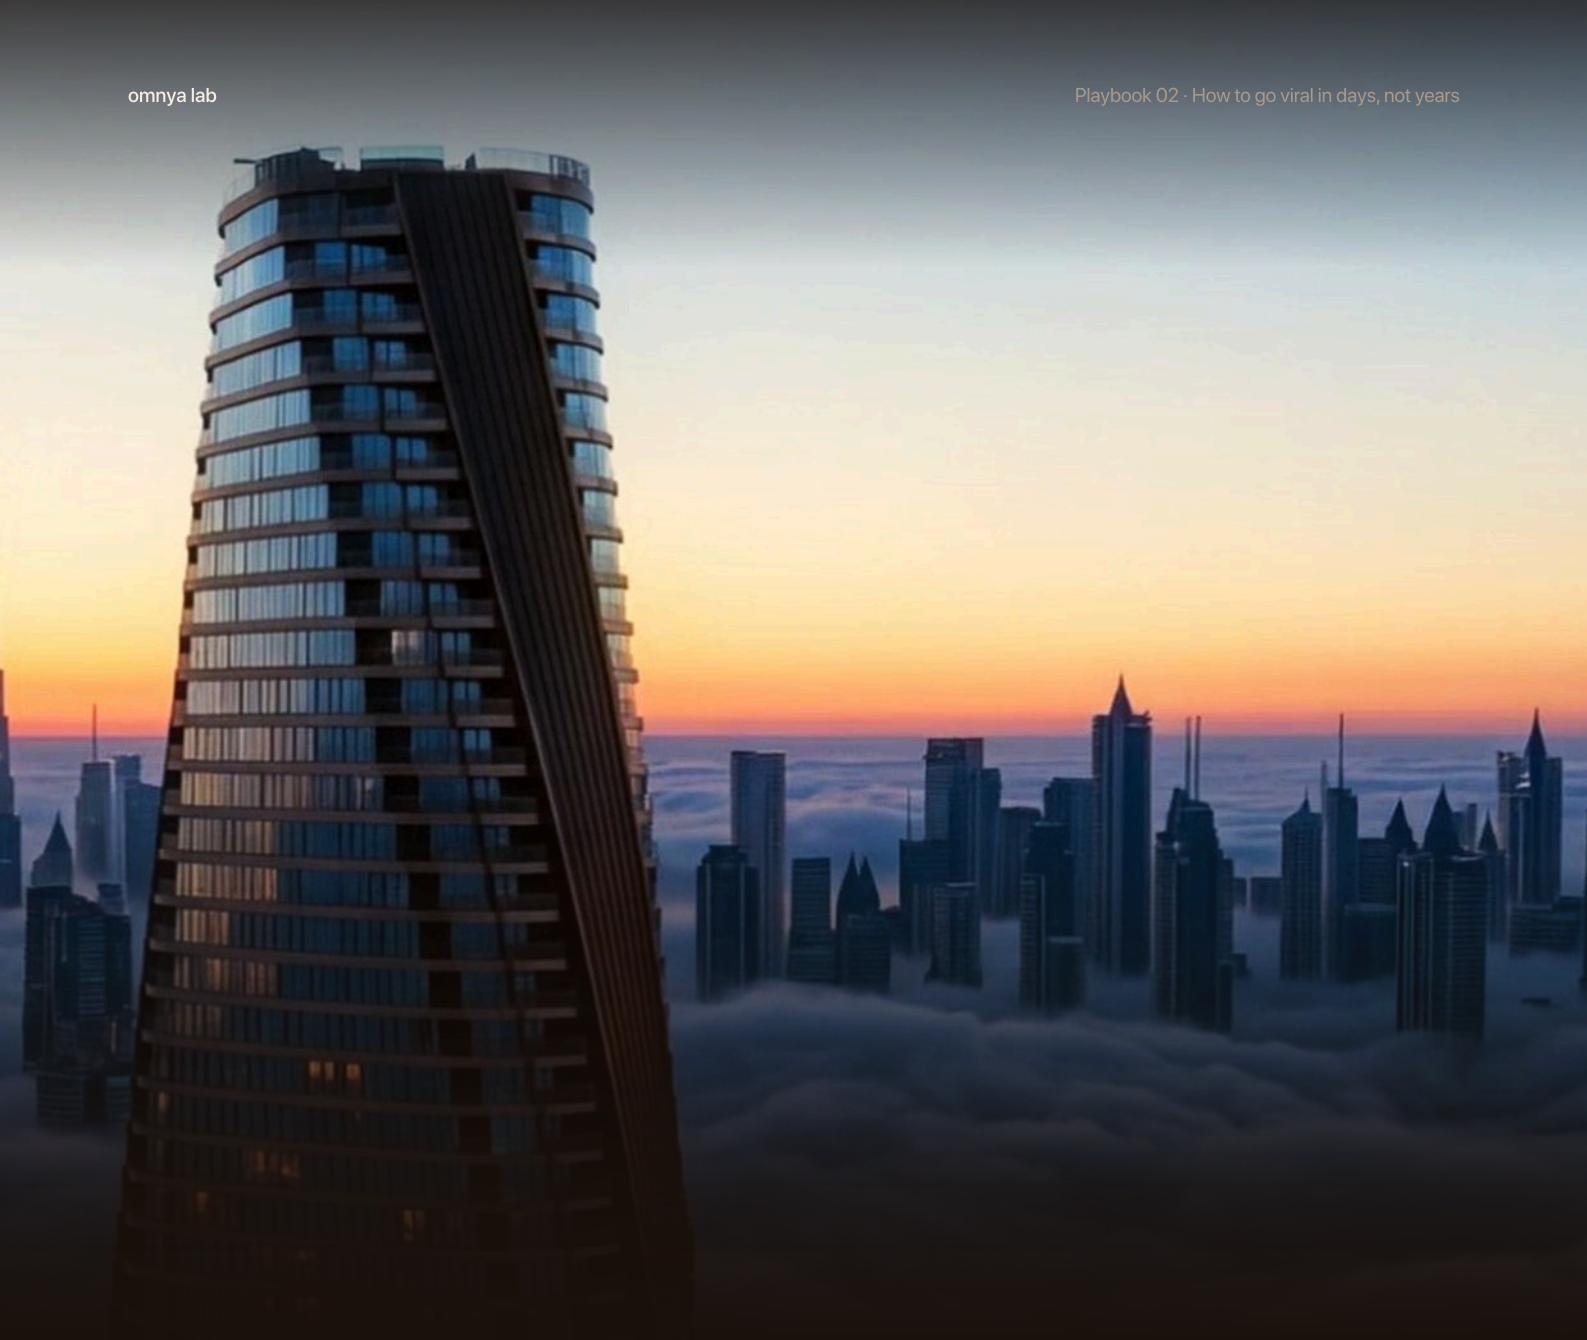

- Every word stays between x 130 and x 950.
- Nothing above y 250.
- Important text above y 1500, small things up to y 1700, nothing below.
- Nothing that matters in the right column, x above 930 between y 1150 and 1700.
- Pictures and clips can go to the edges. Words can't.

## How it ends inside the building

End inside the floor you chose or on the terrace, so the last thing people see is the payoff of the gesture. Our tower reel closed on the project's logo, and the trend study we ran on 11 November recommended ending inside, never on the logo, so that's what we do now.

## Export so it stays sharp

1. **Work from the original clips.** Take frames from the Kling downloads as PNG, never from a preview or a screen recording of the clip.
2. **Text as PNG layers**, rendered at full size, so the edges stay clean after Instagram compresses the reel.
3. **Export 1080 × 1920 with x264 at crf 14 or lower.** Instagram compresses again on upload, so the file you send must be close to lossless.
4. **Watch the export on your phone** before you post it, at full brightness, once with sound and once without.

Chapter 05

# Caption, cover and the word

A link in a caption can’t be tapped, so you ask for one word in the comments and send the link in a DM. With “comment” in the caption, the reels we measured got 2.29 comments per 100 views, against 0.04 without.

## The caption starts with How

The first line is what people read under the reel before they tap "more", so it promises the how-to. Below it, a short body about what's in the video, then an honest question, then the word.

| First lines we posted | Reel |
|---|---|
| "How Claude made me $2,900 in 2 hours" | Hold to build, 9 Nov |
| "HOW TO USE THIS COMBO" | BUILD combo, 9 Nov |
| "How we replaced our 3D artist" | 10 Nov, 114 sends per 1,000 views |

"How we replaced our 3D artist" had 2,635 views and 300 sends, six times the sends per view of the tower.

Caption — the structure we use

First line: How Claude made me $2,900 in 2 hours

Body: two or three short lines about what you see in the video, a little general, written the way you'd say it to a friend.

Question: So be honest, is this the end of 3D artists?

The word: Like and comment "BUILD" and I'll send you [what they get] (follow first, or my DM can't reach you)

## Why a word in the comments

- **2.29% against 0.04%.** Comments divided by views on 38 reels with "comment" in the caption and 78 without.
- **A call to comment gave 203% more comments** in Metricool's study of 24.4 million Instagram posts, while asking for likes gave 4.9% fewer in the data we read.
- **The word multiplies comments 8 to 85 times** on the tutorial accounts we measured: @nocode.joshua's "Comment ROADMAP" got 2,799 comments against his median of 33, and @realrileybrown's "Comment "Phone" if you want to give Claude Code a phone." got 4,627 against 102.
- **The word matches the reel.** BUILD goes under a reel about building, because people comment what they want to receive.

> Instagram's own line, from June 2024: asking for a word only to inflate engagement can stop a post from being recommended, while answering in DMs to send something useful is fine. So the DM always delivers what the reel promised.

## The DM one message, one link

Until 10 November we ran the DMs on ManyChat, then on our own bot. Either works if you keep these rules, which come from the numbers on our reels.

1. **A button opens more DMs than a link as text.** On our reels of 3 to 6 November, with the button, 72% of people opened the link. From 9 to 11 November, with the link as text, 57%.
2. **Follow first.** The caption ends with "(follow first, or my DM can't reach you)", so people follow before they comment and the DM lands.
3. **One DM, in English, with one link to a page.** Never a PDF attached, never three things to do in the same message.
4. **A public reply that rotates** between two or three versions, so it doesn't look like a bot.
5. **Check the limits of your tool.** Our second ManyChat account reached 2,257 of its 2,500 contacts.
6. **Three posts with a word a week at most**, visible to your followers. From 9 to 11 November we had already posted five.

## Trial reels for strangers first

A trial reel goes to people who don't follow you before your followers see it. In our one test, at 4.2K followers, trials reached 14.8K accounts against 6.4K and brought 12.4 follows per reel against 8.8. Our FABLE trial sold best per DM of anything we posted, 3.9 payments per 100 DMs, and the BUILD trial reel had 190K+ views on 13 November.

## The cover for the grid

- **Two or three words, one in colour.** SF Pro in heavy capitals on tilted labels that overlap: white, an orange gradient from #ffb04a to #ff6a2b for the keyword, and black. "3D artists / COOKED" is the shape.
- **The tool logos on the cover**, Claude and Higgsfield, so people know what the reel teaches before they tap.
- **A 4K photo from the reel** with a radial blur at the edges, a vignette and dark fades top and bottom, so the words sit on calm ground.
- **The grid shows 3:4.** Keep title and subject between y 240 and y 1680 on 1080 × 1920, or the profile cuts them.
- **The 100 px test.** Apple's guide for book covers asks that a cover works "when it's only 100 pixels high". Shrink yours and check it still reads.

Chapter 06

# From views to money

Views pay when the word leads somewhere. Our reels with a guide behind the word made €3.65 per 1,000 views, and Omnya City, which gave away houses instead of a guide, made €0.41.

## The funnel from the comment to the pack

Each word leads to a free guide, and the page after the email offers the full version and then everything at once. These are the steps and the prices we use.

1. **Comment the word.** The bot answers in public and sends one DM with one link.
2. **A page with only the email card**, name and email, at an address like omnyalab.com/the-tower-blueprint. Nothing else on it.
3. **"You're all set", then the Full guide at €5.99**, with €29 struck through next to it.
4. **Everything we teach at €59**: the four Full guides and the three playbooks in one pack.

**2,267 DMs**

from the two tower reels, about 1,453 clicks and 65+ Full Tower guides sold by 9 November

**681**

new emails in the week of 9 to 12 November

## What sold 1 to 12 November, net

| Product | Sales | Net |
|---|---|---|
| Full Tower Blueprint | 79 | €210.37 |
| Everything we teach | 9 | €386.41 |
| All three playbooks | 4 | €267.88 |
| Full Towers | 7 | €62.19 |
| Full 3D | 10 | €19.76 |
| Full Build | 2 | €11.10 |

Nine packs made more than 79 guides. The cheap guide brings people in, and the pack is where the money is: up to 9 November, 63% of what we took came from about ten purchases between €29 and €79.

- **Always read the money net**, as Stripe pays it. Gross numbers make a week look better than it was.
- **About €10 net per 100 DMs** was our average on the bot. Use it to tell whether a reel is worth a word at all.
- **A short offer moves people.** The weekend of 7 and 8 November, with a guide at €1.99 until Sunday, gave €261.81 and €123.18 net, the two best days of the month.
- **Pay for your email sender before the reel goes out.** The free plan of Resend stops at 100 emails a day, and on 11 November from 20:37 we lost emails at the peak.

Chapter 07

# What flopped so you skip it

Each of these cost us time or money, and we measured every one. Some got plenty of views and still paid almost nothing, which is why the money per 1,000 views sits next to the views in our notes.

# What we tried and what happened

| What we tried | What happened | Do this instead |
|---|---|---|
| **Omnya City**, a free house in our city for every follower | 1,957 houses taken and 10 payments from 9 people, €24.67 net, €0.41 per 1,000 views. People who follow for a house don't watch the rest. We stopped it on 11 November. | Give a guide that matches the reel |
| **A piece of news** | The Fable 5.2 news did 747K and 392K for others on 8 and 9 November, then 2.9K and 5.5K on the 10th. Ours had 2.4K. | News lasts 48 hours; post on day one or skip it |
| **The house that builds itself** | 6.9K and 5.1K views on 10 November. A house got sent 11 times per 1,000 views, the tower 19. | A huge subject with one gesture |
| **The same video posted again** | About a quarter of the first post, for us and for @lynam_up. | A new subject in the same format |
| **Long reels** | 7.1× followers at 35 to 60 seconds against 28.2× at 12 to 20, in the reels closest to ours. | 12 to 20 seconds |
| **Ads to the site** | About €43 in total. The tower campaign spent €13.70 for about 180 visits and 26K reach, and 1 sale we can't tie to it. | Spend the time on the next reel |
| **Links in stories** | 165 stories in 28 days, 0 clicks on the link, 10 replies. | Put the link in the DM |
| **Mean hooks** | A median of 6.7K views against 100K for hooks that show a result. | Show what just happened |
| **The link as text in the DM** | 57% opened it, against 72% with a button. | A button whenever your tool allows it |
| **Made-up houses**, before 26 October | A median of about 1,400 views and 0 follows. | Show how it's made |
| **Hashtags** | 31.7% fewer views in one study, as a correlation only. | Leave them out |
| **A page named after a brand** | @rendair.ai has 192,605 followers and a median of 20 likes. | A person talking, behind the account |

Our house that builds itself. A house is something people see every day, while a tower or a stadium is a huge thing everyone knows, and the house got sent 11 times per 1,000 views against 19 for the tower.

# Your first 7 days
## one reel, start to finish

Each day uses only what's in the chapters before, so you can open the chapter it points to and follow it.

**Day 1** — Ch. 01 · 02

### Pick the format

Scroll the reels in your niche from the last two weeks and divide views by followers. Keep one with a high multiple, one huge subject and one gesture. Write down its length, its audio, the second the drop lands and its line on screen.

**Day 2** — Ch. 03

### Make the 3D with Claude

One HTML page in three.js with your subject, only what the camera sees, and the gesture as a button. Record the camera move as an MP4.

**Day 3** — Ch. 03

### Turn frames into photos

Nano Banana Pro in Unlimited, one image per send, the 3D frame as image 1 every time. Choose the mother photo, then grade every output.

**Day 4** — Ch. 03

### Make the clips

Write the budget first. One Kling clip at a time, check the first and last frame, start the next from the true last frame, two redos at most.

**Day 5** — Ch. 04

### Edit

12 to 20 seconds on the same trending track, the reveal on the drop, two lines of text at most inside the safe zone, the end inside the building. Export at crf 14 and watch it on your phone.

**Day 6** — Ch. 05 · 06

### Set up the word

The page with the email card and the guide, the DM with one link and a button, the public replies, the email plan that holds a peak. Make the cover and write the caption. Test the whole path from a personal account.

**Day 7** — Ch. 05 · 06

### Post and read

Most of our reels went out around 18:00. Pin a funny first comment and answer the comments. The next day read views divided by followers, sends per 1,000 views, the share of DMs opened and the money net. Then the next subject in the same format, with one tower-style reel a week and three posts with a word at most.

# Make the next one with us

If you want us next to you on your own reel, from the format to the funnel, we teach it one to one on your project.

| Lesson | Price | What you get |
|---|---|---|
| Session, 60 min | €190 | One to one on your project. You leave with your first image. |
| Build, 3 hours | €490 | The whole method set up on your accounts, on your project. |
