FREE BLUEPRINT

STEAL OUR 3D TO FILM METHOD

5 STEPS, FREE

THE EXACT STEPS BEHIND OUR FILMS

OMNYA LAB

THE RESULT

SAME HOUSE
SAME CAMERA

On the left the 3D, on the right the film. A villa that started as boxes in a browser and ended as a walk-through film that looks shot on site.

Five steps take it from one to the other, and this blueprint shows you each of them.

STEP 01

THE HOUSE IN CODE

Claude writes the villa in three.js, in real metres. A 30 × 14 m house raised 1.2 m above the garden, ceilings at 4 m, glass in single panels, and every sofa, table and lamp at its catalogue size, checked within 3 cm.

It opens in the browser: no SketchUp, no 3ds Max, nothing to install.

STEP 02

ONE CAMERA PATH

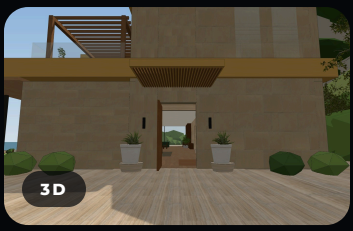

Twelve stops on one rail. Out of the foliage, through the side door, past the sofa and the dining table, over the kitchen island, out on the terrace, down the steps to the pool, and back to the whole villa.

15 seconds, a 20 mm lens at eye height, fast at the start and slow in the middle where the rooms are.

STEP 03

THREE PHOTOS APPROVED

The entrance, the living room and the outside. Each one made on Nano Banana Pro from the 3D with the camera locked, and approved before any video exists.

PROMPT **NANO BANANA PRO · THE ENTRANCE**

```
EDIT Image 1. Image 1 is a 3D model of the same villa
in Camps Bay, Cape Town: turn it into a real
photograph. CAMERA LOCK: keep the exact camera, lens,
height and framing of Image 1, aligned to the pixel,
with every wall, window, roof and piece of furniture
exactly where it is and at the same size. Image 2 is
the approved photograph of the living room of this
same house: every material, colour and finish comes
```

The whole prompt, and the other two, are in the Full Blueprint

STEP 04

THE WALK

One take of 15 seconds on Seedance 2.5. The 3D walk goes in as Video 1, the three photos as Images 1 to 3. A cheap 480p draft first, then the same take in 1080p.

PROMPT — SEEDANCE 2.5 · HOW IT OPENS

```
One continuous handheld-smooth single take, no cuts, no people. The camera follows exactly the path, speed and framing of Video 1, frame by frame: Video 1 is a grey 3D model and gives only the camera movement and the position of every wall, opening, piece of furniture and object. Every surface, material, piece of furniture, plant and the light come from the three approved photographs: Image 1 for the entrance, Image 2 for the living room, dining room and kitchen, Image 3 for the garden, the pool and the facade. The blocky green shapes and the angular trees in Video 1 are only placeholders for the real planting of Images 1 and 3.
```

→ The second-by-second timeline that follows is in the Full Blueprint.

STEP 05

MAKE IT LIVED IN

The small things go in every prompt. Plants only in pots against the walls, towels on the grass facing the pool, a flamingo in the water, a live flame in the fireplace, every lamp off in daylight.

That is what takes it from a showroom to a house someone lives in.

Every prompt, word for word, and the checks we run before anything goes out are in the Full Blueprint.
